1 Introduction:

Go Blogger is a free software open source package written in PHP, originally for use on Blogging Site. It runs on Most operating systems, is written in PHP, primarily uses the MySQL database server.

It is not a tutorial; it just points you to various places where you can go learn whatever is necessary.

2 What is Blog ?

- A blog is a personal diary. A daily pulpit. A collaborative space. A political soapbox. A breaking-news outlet. A collection of links. Your own private thoughts.

2.1 Blog in Detail !

A blog is basically a type of website, like a forum or a social bookmarking site. As such it is defined by the technical aspects and features around it, and not by the content published inside it.

The features that make blogs different from other websites are:

- Content is published in a chronological fashion
- Content is updated regularly
- Readers have the possibility to leave comments

3 Installation Of Go Blogger !

3.1 Requirements:

- Go Blogger tar ball
- LAMP or WAMP
- PHP. 5
- Database Server
 - (a) MySQL 5.1

4 Editing Pages !

- It's very easy to write the blog . It only takes a few clicks.
 1. Click the "blog" tab at the top of the main page.
 2. Give your blog name and write your blog content.
 3. Click the "Publish" button.
- Simple as that!

4.1 How To Use Go Blogger !

- First copy paste go blogger in your document root.
- Secondly run createdb.php – Which will create your database and tables in your database.
- Run index.html file in your browser.And use go blogger.
